Making Things Hard on Yourself, But in a Good Way: Creating Desirable Difficulties to Enhance Learning

Robert A. Bjork

and

Elizabeth L. Bjork

University of California,
Los Angeles

University of California,
Los Angeles

Paradoxically, certain conditions that impair performance during instruction or practice can enhance learning, whereas conditions that retard forgetting and enhance performance during practice often fail to support learning. Such findings reflect unique aspects of the functional architecture of humans as learners, and they help to clarify why instructors are susceptible to choosing non-optimal conditions of instruction, why learners are prone to illusions of comprehension, and why real-world learning is seldom as effective as it might be.

SATURDAY

Cross-Cutting Theme Program

9:30 AM – 12:10 PM

Sheraton Ballroom V

The Meaning of Time

Time affects our thoughts, feelings, and behaviors at a variety of levels, yet scientists have been slow to study these influences. This cross-cutting theme program includes a diverse set of presentations on time perception. The talks will cover findings on how neural memory structures enable simulation of future events, perceptions of having lots or little time left in life, construing events as “soon” or “a while from now,” individual differences in time perceptions affecting work behavior, and autobiographical life stories. Whatever your schedule, be sure to make time for these presentations.

9:30 AM – 9:55 AM

The Clocks That Time Us Are Not the Same: Temporal Diversity and Temporal Leadership in Teams

Susan Mohammed, The Pennsylvania State University

Although differences in how members value time can substantively influence team processes and performance, the impact of temporal diversity is regularly overlooked. Empirical research reinforces the importance of examining the influence of time urgency, polychronicity, and pacing style diversity on team outcomes, as moderated by variables such as temporal leadership.

10:00 AM – 10:25 AM

Expansive and Contractive Temporal Scope

Yaacov Trope, New York University

Adaptive functioning requires both being able to immerse ourselves in the here and now, contracting our temporal scope, and being able to move beyond current experience, expanding our temporal scope. I examine the mechanisms humans have evolved to support both contractive and expansive temporal scope and the ability to switch between them.

10:30 AM – 10:55 AM

The Psychological Self in Time: From Actor to Agent to Author

Dan P. McAdams, Northwestern University

From birth through old age, the psychological self is expressed in three successive guises. As a social actor, the self's traits and roles evoke the performative present. The motivated agent projects goals and values into the future. Finally, the self as autobiographical author integrates the reconstructed past, experienced present, and imagined future into a coherent life story.

Coffee Break

11:00 AM – 11:15 AM

11:15 AM – 11:40 AM

Taking Time Seriously in Life-Span Development

Laura L. Carstensen, Stanford University

Age is typically represented as time since birth. According to socioemotional selectivity theory, perceived time left exerts strong influences on human development. I will present findings suggesting that constraints on time systematically influence motivation: Emotional experience grows more complex, and cognitive resources are increasingly allocated to emotionally meaningful goals.

11:45 AM – 12:10 PM

Episodic Simulation of the Future and the Past

Daniel L. Schacter, Harvard University

Episodic simulation refers to the construction of a detailed mental representation of a hypothetical event. Episodic simulation can be used to imagine possible future events and to generate alternative or counterfactual versions of past events. This talk will consider cognitive and neuroimaging evidence that reveals both similarities and differences between simulations of future and past events.

Truth and Advocacy

Phoebe C. Ellsworth

University of Michigan

The goals of disseminating our hypotheses and discovering the truth are sometimes imperfectly aligned, and this is especially conspicuous in social policy research, although by no means unique to it. I discuss ways to protect ourselves against bias in the conduct, evaluation, and communication of research. One strategy is to create comprehensive, authoritative repositories of research on an issue, so as to become the primary source of information on that issue for the news media and the general public.

The Development of Psychopathology: Mechanisms, Stigma, and Hope

Stephen P. Hinshaw

University of California, Berkeley

Easing the burden of mental illness requires the best of basic and applied psychological science via multidisciplinary, multilevel research. I discuss (a) the role of developmental processes in the genesis and maintenance of psychopathology; (b) applications, through longitudinal/mediational

investigations, to impulse-control problems and externalizing behavior; (c) the role of intervention research in elucidating relevant pathways; and (d) the still-prevalent stigma related to mental disorders, which must be reduced to generate hope.

Bring the Family Address

6:00 PM – 7:00 PM

Chicago Ballroom VI & VII

Parents Without Parenting

GENERAL

Alison Gopnik

University of California, Berkeley

About 30 years ago, “parenting” happened. People have always cared about their children, but “parenting” turns caring for children into a plan to create a particular kind of child and adult—smart, successful, or just happy. But this picture of parents and children is profoundly wrong, both scientifically and practically.

Children need care, but they don’t need to be shaped in a particular way. There are new ideas about human evolution and how children actually learn from the people who care for them through everyday observation, conversation, and play. The latest science tells us that caring for children means creating a rich, safe, and stable world where they can thrive. But children are messy, unpredictable, imaginative, and very different from their parents and from each other; this lets people innovate, create, and survive in an unpredictable world.

“Parenting” treats childhood as a time of careful control, but it should be complicated, unpredictable, and constantly surprising.

Book signing: *The Philosophical Baby* | 7:00 PM – 7:20 PM | Ballroom Promenade

Saturday Night Reception

7:00 PM – 8:30 PM

Ballroom Promenade

The APS Saturday Night Reception is a wonderful opportunity to renew acquaintances and network with colleagues. Light hors d’oeuvres will be served.

Play the Scavenger Hunt in the APS Exhibit Hall-Riverwalk Friday and Saturday for a chance to win a one year free APS membership and complimentary 2017 convention registration.

Visit the APS Booth (#604 & 606) for your game card.

ANNUAL REVIEWS ✨ CONNECT WITH OUR EXPERTS

Three High-Impact Journals in the Psychological Sciences:

Annual Review of Clinical Psychology

clinpsy.annualreviews.org • Volume 12 • March 2016

Co-Editors: **Tyrone D. Cannon**, *Yale University*

Thomas Widiger, *University of Kentucky*

The *Annual Review of Clinical Psychology*, in publication since 2005, provides comprehensive reviews of significant developments in the field of Clinical Psychology and Psychiatry. The journal covers research, theory, and the application of psychological principles to address recognized disorders, including schizophrenia, mood, anxiety, childhood, substance use, cognitive, and personality disorders. Articles also address broader issues cross-cutting the field, such as diagnosis, treatment, social policy, and cross-cultural and legal issues.

Annual Review of Organizational Psychology and Organizational Behavior

orgpsy.annualreviews.org • Volume 3 • March 2016

Editor: **Frederick P. Morgeson**, *The Eli Broad College of Business, Michigan State University*

The *Annual Review of Organizational Psychology and Organizational Behavior*, in publication since 2014, is devoted to publishing reviews of the industrial and organizational psychology, human resource management, and organizational behavior literature. Topics for review include motivation, selection, teams, training and development, leadership, job performance, strategic HR, cross-cultural issues, work attitudes, entrepreneurship, affect and emotion, organizational change and development, gender and diversity, statistics and research methodologies, and other emerging topics.

Annual Review of Psychology

psych.annualreviews.org • Volume 67 • January 2016

Editor: **Susan T. Fiske**, *Princeton University*

The *Annual Review of Psychology*, in publication since 1950, covers the significant developments in the field of Psychology, including biological bases of behavior, sensation and perception, cognitive processes, animal learning and behavior, human development, psychopathology, clinical and counseling psychology, social psychology, personality, environmental psychology, and community psychology.
