Interdependence, American Style

Hazel R. Markus

Stanford University

Interdependence pervades many U.S. cultures and psyches. Yet White mainstream American college-educated cultures emphasize independence. As a result, many Americans with power and status have less practice with interdependence.

Promoting interdependence can not only bridge cultural divides within the U.S., but also enhance individual motivation and performance.

CROSS-CUTTING THEME PROGRAM

1:00 PM – 3:55 PM

Commonwealth

Doing the Most for the Many: Psychological Scientists Who Inform Public Policies

Psychological science can impact policy through research that informs policy, advocacy for psychologically aware policies, direct involvement with government officials in creating and evaluating programs, and direct service as an elected official. Experts from a range of areas, including clinical, community, developmental, and social psychology, will discuss their experiences interacting with the executive, legislative, and judicial branches of state and federal governments.

1:00 PM – 1:15 PM

Psychology and State Government

Ruth B. Balsler, Massachusetts Legislature
State Representative

After serving as a clinical psychologist for many years, Representative Balsler resolved to serve her community and her state as a

Representative in the Massachusetts state legislature. She will speak about how her career in mental health has informed her politics and helped her be effective in state government and what lessons she has learned along the way.

1:15 PM – 1:30 PM

The Importance of Personal Involvement at the Federal Level

Patrick DeLeon, Former President of
American Psychological Association

Having served with U.S. Senator Daniel K. Inouye for 38-plus years, I have come to appreciate the critical importance of personal involvement in the public policy (political) process. Psychology has much to contribute to our nation's quality of life. To be effective, however, our collective voice must first be heard.

1:30 PM – 1:45 PM

Advocating for Psychology at the State and Federal Levels

Elena J. Eisman, American Psychological
Association

Throughout her career, Elena J. Eisman has balanced clinical practice with service as an advocate for psychology in coalitions and task forces and with legislators at the state and national level. As the executive director of the Massachusetts Psychological Association for over 20 years and now Director of the APA Center for Psychology and Health, she will share her experiences as an advocate for the field of psychology and share how others can get involved.

2:20 PM – 2:45 PM

The Reduction in Smoking Prevalence: Influences, Future Challenges, and Lessons

Timothy B. Baker, University of Wisconsin-Madison

Smoking prevalence has fallen markedly over the past 50 years. In this talk, I will describe the magnitude of this change and its consequences. I will also attempt to identify factors causing this remarkable change and challenges to future progress, and derive lessons learned from a half century of work.

2:45 PM – 3:10 PM

Fuzzy-trace Theory: Risk-reduction Programs that Work for Adolescents and Adults

Valerie F. Reyna, Cornell University

Theoretical mechanisms identified in basic research on risky decision making can be translated into effective health programs. Applying fuzzy-trace theory to promote gist processing has been shown to increase value-concordant medication decisions, decrease interest in inappropriate genetic testing, and reduce sexual risk-taking in adolescents. Implications for practice and policy are discussed.

3:10 PM – 3:35 PM

Translating Social Science to Improve the Lives of Children and Youth

Elizabeth T. Gershoff, The University of
Texas at Austin

There are many non-academic audiences interested in research on children, including parents; the media; non-profit organizations; advocates; and local, state, and federal governments, yet academics get no training in how to translate research to these audiences. Elizabeth Gershoff will share what she has learned about translating research and use her work on school corporal punishment as a case study.

Ambivalent Stereotypes Support Inequality and Conflict – or Peace

Susan T. Fiske

Princeton University

Stereotypes go beyond mere valence to include ambivalence on universal dimensions of warmth and competence. Societal variables, such as income inequality and peace or conflict, predict ambivalence across nations. Stereotypes may support social systems through psychological mechanisms such as pity and envy, images of rich and poor people, and race-status associations.

Getting Comfortable With Big Data

Who is doing computational social science, and why? Among social scientists and humanities scholars, there is a clear appetite to engage with data at an accelerated rate. And while a recent study suggests that a majority of researchers who hadn't yet used Big Data would like to, the challenge of the new remains. This session follows from a white paper on 'Who is doing computational social science?' released last year by SAGE Publishing, and will look at the back story of Big Data social science and the fast-paced evolution of entire opportunities and methods to confront those challenges.

What Makes the Human Mind Special? Insights From Nonhuman Animals

Laurie R. Santos

Yale University

Why are humans the only species that reads fiction, tells jokes, and shares photos on Instagram? In this talk, I will explore this question of human uniqueness by examining what makes the human mind so different from that of other animals. I will first discuss recent work in comparative cognition that shows a number of ways that other animals are strikingly similar to humans in the way they think about the world. I will also explore some key cognitive differences between humans and other animals that make the human species different from other animals but also a bit less rational than you might expect.

SATURDAY

Saturday Night Reception

7:00 PM – 8:30 PM

Disney Research

As part of The Walt Disney Company, Disney Research builds upon a rich legacy of innovation and technology leadership in the entertainment industry that continues to this day. Disney Research was launched in 2008 to drive value across company through technological innovation. Our research covers a broad range of exciting and challenging applications that are experienced daily by millions of people around the world.

Our staff interacts directly with all core business areas of The Walt Disney Company including Theme Parks and Imagineering, Consumer Products, our Live Action and Animation Studios, and Media Networks. We publish our research and are actively engaged with the global research community. Our researchers collaborate closely with co-located academic institutions.

The behavior science group at Disney Research has a broad focus, including research in the fields of decision-making, behavioral economics and computational social science, using big data methods and online, lab and field studies.

www.disneyresearch.com
